

201 Stainless Steel Coil

201 stainless steel coils has the characteristics of polishing without bubbles and pinholes. It is an excellent material for the production of various watch cases and strap bottom covers. Ningbo Qihong Stainless Steel is a professional 201 stainless steel coil supplier, we have excellent quality and price, we also supply customized service, look forward to becoming your long term partner in China

201 stainless steel coil is mainly characterized by ultra-thin, long life, wear resistance, corrosion resistance, heat resistance, low temperature strength and other properties. The width of 201 stainless steel coils of many manufacturers is different, but the market is still mainly 1.5m, and it can also be customized according to needs. 201 stainless steel coils are mainly used for outdoor open-air machines in chemical, coal and petroleum industries that require high resistance to grain boundary corrosion, heat-resistant parts of building materials and parts with difficult heat treatment. Such as: petroleum waste gas combustion pipes, engine exhaust pipes, boiler shells, heat exchangers, heating furnace parts, muffler parts for diesel engines, boiler pressure vessels, chemical trucks, expansion joints, furnace pipes and spiral welded pipes for dryers Wait.

Product Parameter (Specification)

Material	201
Surface	NO.1, NO.4, 2D, 2B, BA, 6K, 8K, Mirror, etc
Thickness	0.02mm-4.0mm/Customized
Length	200-3500 mm or customized
Width	2-1500 mm or customized
Standard	ASTM, JIS, GB, AISI, DIN, BS, EN

Certifications	SGS ISO9001
Packing	Industry standard packaging or according to client's requirement
Brand	TISCO, POSCO, BAO STEEL, TSINGSHAN, QIYI STEEL etc .
Payment terms	L/C, T/T
Delivery time	Up to order quantity, contact us to know

Polishing Method of 201 Stainless Steel Coil

There are three polishing methods for 201 stainless steel coils, chemical polishing, mechanical polishing and electrochemical polishing. Generally speaking, chemical polishing is suitable for temporary or small-batch miscellaneous parts that do not require high brightness, mechanical polishing is suitable for processing simple parts, while electrochemical polishing has stable processing technology and simple operation, suitable for mass production. Qihong Stainless provides stainless steel material processing, warehousing and distribution services, and has established stable cooperative relations with Taiyuan Iron and Steel, Baosteel, QY steel and some other steel factories. In addition to 200 series steel such as 201 stainless steel coils, the main materials also cover 300 series, 400 series, dual-phase steel, etc., with reliable quality and prompt delivery.
